1 Temperatura do Ponto de Orvalho

■ Saturação Adiabática e Temperatura de Bulbo Úmido

- Saturação Adiabática
- Temperatura de Bulbo Úmido
- Psicrômetro Giratório

3 Referências e Tópicos de Leitura

Esta apresentação baseia-se nas referências [1], Seções 14-3 a 14-4 (tópicos de leitura) e [2].

Temperatura do Ponto de Orvalho, T_{po}

Definition

Temperatura de ponto de orvalho é definida como a temperatura na qual se dá o **início da condensação** quando o ar é resfriado à **pressão constante**.

Processo de resfriamento a pressão constante desde a temperatura inicial, T_1 , até a temperatura do ponto de orvalho, T_{po} . Diagrama em escala

$$\omega_1 = \omega_2 \quad \rightarrow$$

$$h_1 = h_2 \quad \rightarrow$$

$$T_1 = T_2.$$

Temperatura de Bulbo Úmido, T_{bu}

- Em geral, a temperatura de saturação adiabática segue $T_{po} \leq T_{sa} \leq T$;

Temperatura de Bulbo Úmido, T_{bu}

- Em geral, a temperatura de saturação adiabática segue $T_{po} \leq T_{sa} \leq T$;
- Para ar com vapor saturado, tem-se: $T_{po} = T_{sa} = T$;

Temperatura de Bulbo Úmido, T_{bu}

- Em geral, a temperatura de saturação adiabática segue $T_{po} \leq T_{sa} \leq T$;
- Para ar com vapor saturado, tem-se: $T_{po} = T_{sa} = T$;
- A medição de (P, T, T_{sa}) permite determinar as umidades (absoluta e relativa) do ar;

Temperatura de Bulbo Úmido, T_{bu}

- Em geral, a temperatura de saturação adiabática segue $T_{po} \leq T_{sa} \leq T$;
- Para ar com vapor saturado, tem-se: $T_{po} = T_{sa} = T$;
- A medição de (P, T, T_{sa}) permite determinar as umidades (absoluta e relativa) do ar;
- Porém, a necessidade de **canal longo** para a saturação é um inconveniente;

Temperatura de Bulbo Úmido, T_{bu}

- Em geral, a temperatura de saturação adiabática segue $T_{po} \leq T_{sa} \leq T$;
- Para ar com vapor saturado, tem-se: $T_{po} = T_{sa} = T$;
- A medição de (P, T, T_{sa}) permite determinar as umidades (absoluta e relativa) do ar;
- Porém, a necessidade de **canal longo** para a saturação é um inconveniente;
- Uma abordagem mais prática é a do **par** de termômetros com **bulbos seco e úmido**.
- As medidas correspondentes são $T_{bs} \equiv T$ e T_{bu} ;
- Neste esquema, *assume-se* $T_{bu} \approx T_{sa}$.
